Thermal conductive tape

Thermal tape

Thermally conductive tape

Jintuo™ Conductive tape

Description of thermally conductive tape

Thermally conductive tape is made by the combination of high performance acrylic glue and high thermal conductivity ceramic powder, which can offer the reliable and durable thermal conductivity. The adhesive is also electrically isolating the surfaces and available with one or

two side release paper or film.

Thermally conductive tape designed to provide a preferential heat-transfer path between heat-generating components and heat sinks or other cooling devices.

Features of thermally conductive tape

Offering improved surface wet out and excellent shock performance;

Providing on a silicone treated polyester liner for ease of handling and die cutting;

High acrylic adhesive tape for pressure sensitive of various surfaces;
